

Use the checks listed below to run your real data against the xml rules.

<i>Name of Class</i>	<i>Description</i>	<i>Applies to</i>
ChecksEqual	Checks for equality of values	Long, Integer, Boolean, String, Date
ChecksNotEqual	Checks if two values are not equal	Long, Integer, Boolean, String, Date
CheckContains	Checks if one String contains another String	String
CheckNotContains	Checks if one String does NOT contain another String	String
ChecksUppercase	Checks if a given string contains upper case characters only	String
ChecksLowercase	Checks if a String contains lower case characters only	String
CheckEndsWith	Checks if a String ends with a certain String	String
CheckNotEndsWith	Checks if a String NOT ends with a certain String	String
CheckStartsWith	Checks if a String starts with a certain String	String
CheckNotStartsWith	Checks if a String NOT starts with a certain String	String
ChecksGreater	Checks if a numeric value is greater than the other one. In case of Strings checks if the length of the String is greater than the other.	Integer, Long, Double, Float, String, Date
ChecksGreaterOrEqual	Checks if a numeric value is greater or equal than the other one. In case of Strings checks if the length of the String is greater or equal than the other.	Integer, Long, Double, Float, String, Date
ChecksInList	Checks if a string is contained in a list of values. The list is represented by a string where the individual values are separated by a comma (,)	String
ChecksNotInList	Checks if a string is not contained in list of values. The list is represented by a string where the individual values are separated by a comma (,)	String
ChecksBetween	Checks if a numeric value is between two given values	Integer, Long
ChecksNotBetween	Checks if a numeric value is not between two given values.	Integer, Long
ChecksSmaller	Checks if a numeric value is smaller than the other one. In case of Strings checks if the length of the String is smaller than the other.	Integer, Long, Double, Float, String, Date
ChecksSmallerOrEqual	Checks if a numeric value is smaller or equal than the other one. In case of Strings checks if the length of the String is smaller or equal than the other.	Integer, Long, Double, Float, String, Date
ChecksNumeric	Checks if a value is numeric, meaning all characters are numbers	String
ChecksEmpty	Checks if a String value is empty, meaning of zero length	String
ChecksNotEmpty	Checks if a String value is NOT empty, meaning its length is greater than zero	String
ChecksNull	Checks if a value is Null	String
ChecksNotNull	Checks if a value is NOT Null	String
CheckLength	Checks if a String has a certain length. In case of an integer, checks the number of digits the integer consists of	String, Integer
CheckMatches	Checks if a String matches another, using a regular expression pattern	String
CheckNotMatches	Checks if a String does NOT match another, using a regular expression pattern.	String
CheckSoundsLike	Checks if a String sounds like another, using the soundex algorithm	String
CheckNotSoundsLike	Checks if a String does not sound like another, using the soundex algorithm	String
ChecksNegativeNumber	Checks if a number is smaller than zero (0)	Integer, Long, Double, Float
